# REJUVA MED – MULTI-TECHNOLOGY FOR MAXIMUM RESULTS

Reveal your most radiant skin with the CACI Rejuva Med, an advanced five-step treatment that combines five-clinically proven technologies in one powerful session. This results-driven treatment is designed to brighten, lift, tighten, and rejuvenate the skin while supporting long-term skin health with minimal downtime.

Your Rejuva Med treatment can also be tailored to your individual skin needs, ensuring a personalised approach whether your goal is improved firmness, enhanced radiance, smoother texture, or overall skin rejuvenation.

Rejuva Med can be enjoyed as a one-off treatment for an instant glow-up, perfect before a special occasion. For optimal, longer-lasting results, a course of six or more treatments is recommended

## REJUVA MED 5 STEP TREATMENT

| STEP | ACTION                            | TECHNOLOGY                 |
|------|-----------------------------------|----------------------------|
| 1    | Deep Cleansing & Skin Oxygenation | Prep & Glow Oxygenation    |
| 2    | Skin Firming & Tightening         | Multipolar Radio Frequency |
| 3    | Muscle Toning & Lifting           | Microcurrent               |
| 4    | Skin Rejuvenation                 | Focused Pulsed Light       |
| 5    | Skin Revive Serum Infusion        | Infusion Atomisation       |

---

# STEP 1

## DEEP CLEANSING & SKIN OXYGENATION

The treatment begins with CACI's Prep & Glow Oxygenating Pod - containing skin-brightening Kojic Acid, Vitamin C, and Alpha Arbutin.

As the Pod interacts with a layer of CO2 Activator Gel on the skin, It produces micro-CO2 bubbles that form a cleansing foam. This triggers the Bohr Effect - a natural process that boosts oxygen delivery to the skin - leaving the complexion visibly refreshed and energised.

This step is combined with soothing LED light therapy to target specific concerns, skin appears smoother, healthier, and glowing with vitality. Red LED light boosts collagen and supports skin repair to smooth fine lines, while blue LED calms irritation and blemish prone areas. The combined red/blue LED setting further targets breakouts for a clearer complexion.

**The results: Skin looks clean, healthy, and refreshed, feeling balanced and perfectly prepped for the next stage of the treatment.**

---

# STEP 2

## SKIN FIRMING & TIGHTENING

This step uses multipolar Radio Frequency (RF) technology to heat the deep dermal layers of your skin causing the collagen fibres to contract thereby creating a skin tightening effect. It also stimulates the natural production of new collagen and elastin, the essential building blocks of firm, youthful-looking skin. Think of it as a collagen boost from deep within smoothing, tightening, and lifting where your skin needs it most.

Our unique multipolar technology delivers controlled uniform heating of the skin at different depths making the treatment fast, effective, and very comfortable. It's especially great for areas prone to sagging or volume loss.

For your safety and comfort, the system incorporates an integrated skin temperature sensor that carefully monitors and maintains the optimal temperature throughout the treatment - ensuring maximum results without any discomfort.

**The results: Skin looks visibly plumper, firmer, tighter with fine lines and wrinkles reduced.**

---

# STEP 3

## MUSCLE TONING & LIFTING

This step uses CACI's renowned microcurrent technology to tone the facial muscles. It uses CACI's unique GripTec microcurrent handset to stimulate muscle fibres in order to restore their tone.

The GripTec's specially designed rollers are textured and angled to comfortably grip the facial contours, creating a natural skin fold as they glide across the face. This allows the ultra-low frequency microcurrent to deeply penetrate the skin, targeting and firming the muscles underneath.

This step in the treatment specifically focuses on areas prone to sagging and loss of definition, such as the jowls, cheekbones, and jawline

**The results: Lifts and firms your facial muscles – improving muscle tone and providing more defined and sculpted facial contours.**

---

# STEP 4

## SKIN REJUVENATION

This step focuses on rejuvenating the skin using CACI's proprietary Focused Pulsed Light (FPL) technology that safely targets pigmentation and skin imperfections to brighten and improve your complexion. We customise the treatment to suit your individual skin needs, whether that's improving skin tone, reducing sun damage, boosting collagen for a youthful glow, or calming redness and acne causing bacteria.

Our advanced FPL technology uses specific light wavelengths to focus only on your skin concerns, delivering effective results with no downtime. We filter out the wavelengths that can cause skin trauma, so your skin experiences less irritation and recovers faster. This means you can enjoy more treatments in a shorter time compared to traditional light-energy based treatments.

**The results: Skin is rejuvenated as collagen production is stimulated, and a brighter, blemish-free more youthful complexion is revealed.**

FPL targets skin pigment, so it may not be suitable for darker or tanned skin. Your Rejuva Med practitioner will advise you

---

# STEP 5

## SKIN REVIVE SERUM INFUSION

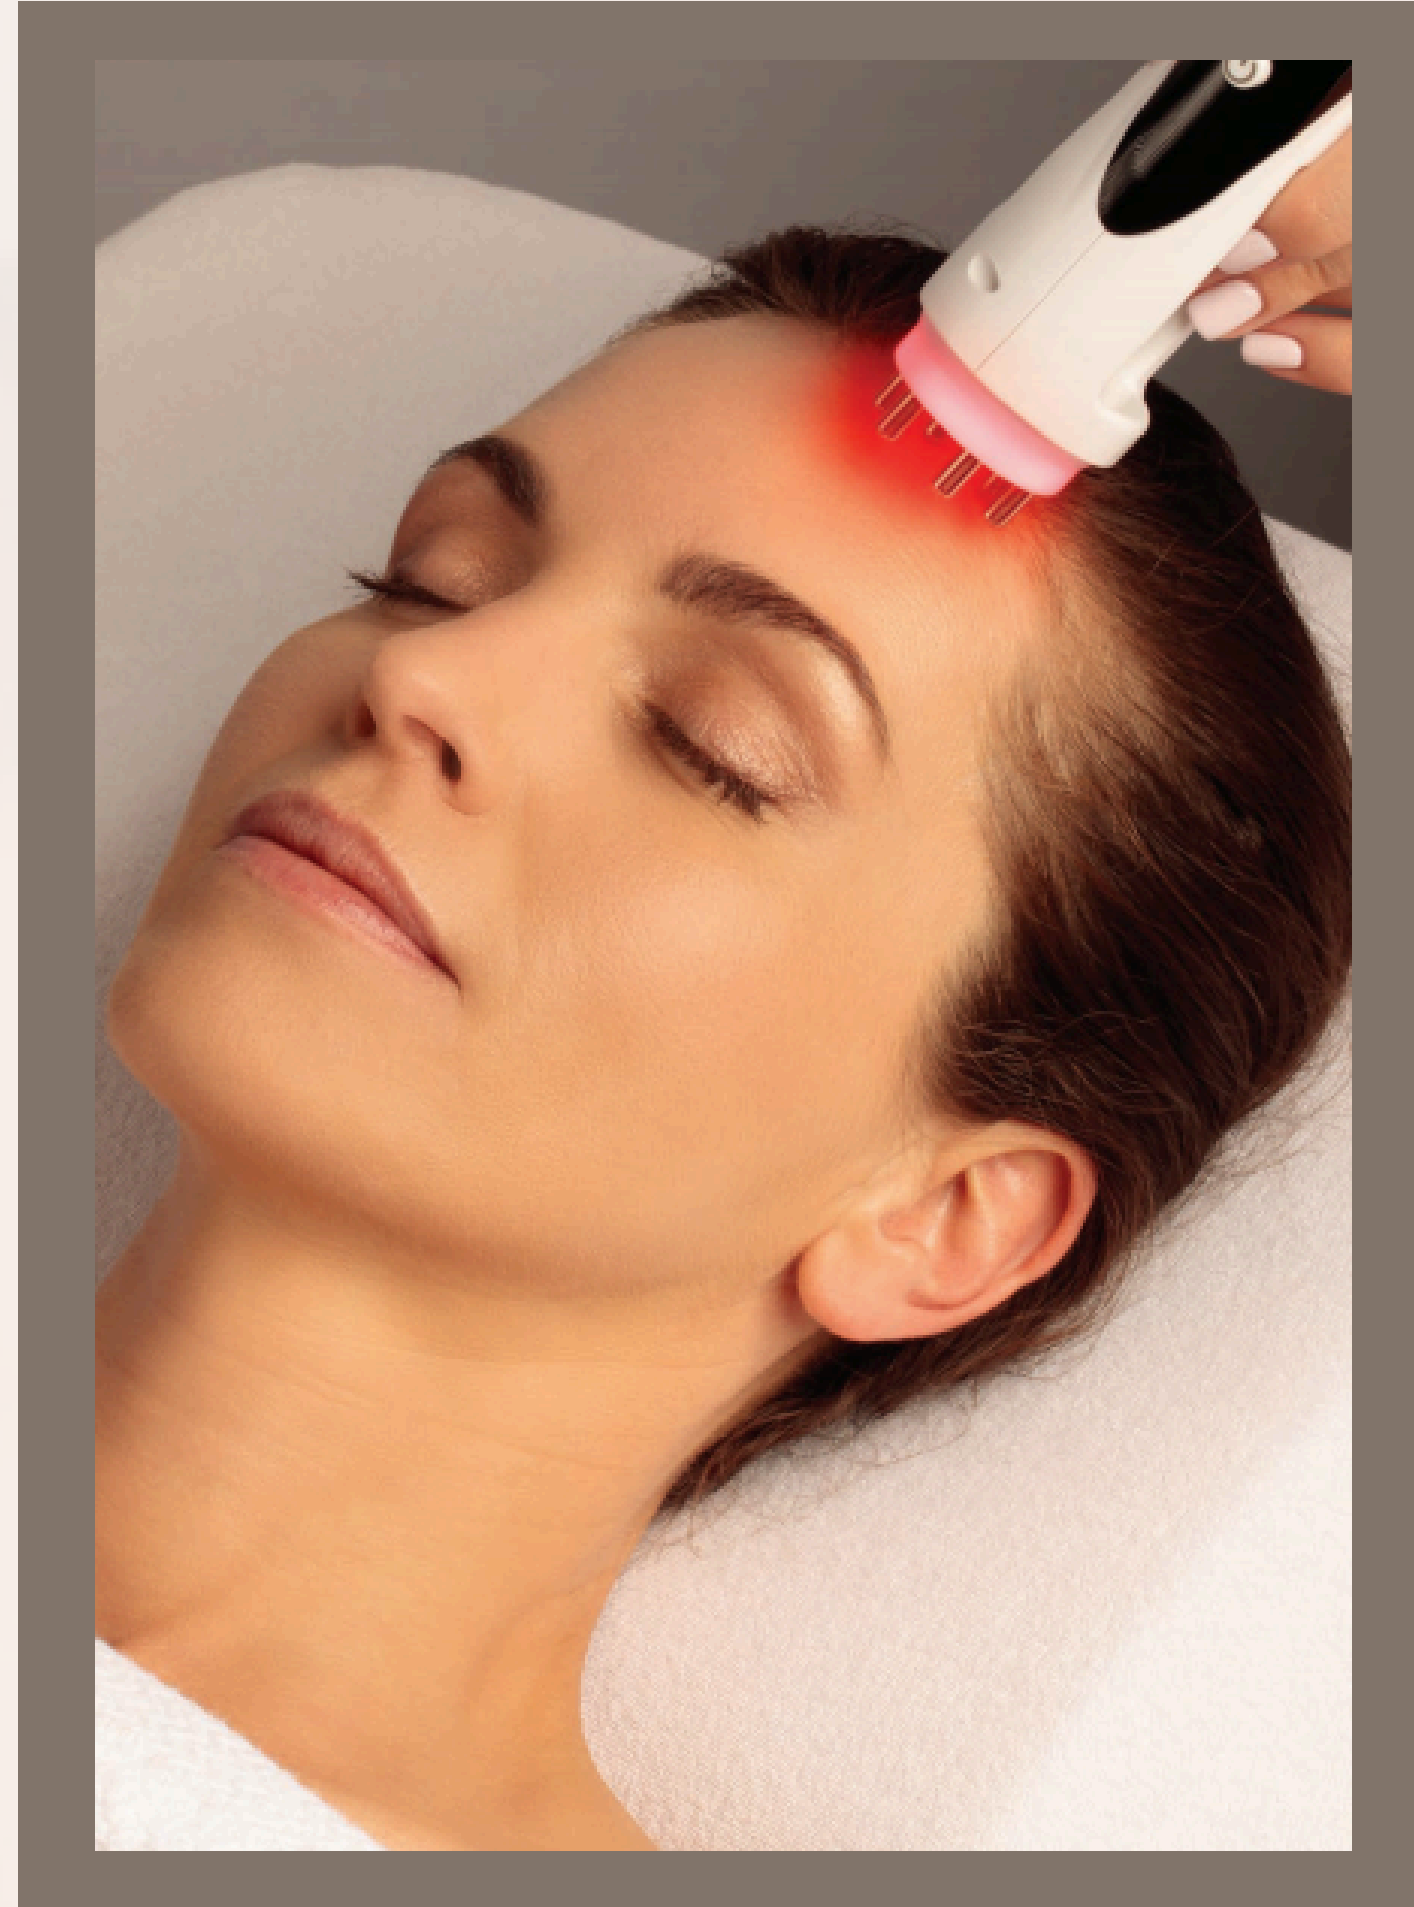

The final step in your treatment delivers CACI's Skin Revive Serum deep into your skin using the Infusion Atomiser a breakthrough, needle-free, serum delivery technology.

The Skin Revive Serum blends plant-derived PDRN, peptides, niacinamide, hyaluronic acid, and tremella mushroom extract to deeply hydrate, repair, soothe inflammation, improve texture, support cell renewal, soften lines and wrinkles, and restore a radiant, youthful glow for all skin types.

The Infusion Atomiser combines three innovative technologies to help your skin absorb the serum's powerful ingredients to their fullest potential. Electro infusion creates tiny channels in the skin, enhancing absorption, while ultrasonic atomisation breaks the serum into ultra-fine particles so it can penetrate more easily. Red and blue LED light therapy then stimulates skin cells, supporting rejuvenation and improving overall skin health.

**The results: Skin feels smoother and firmer, with softened lines and wrinkles and a fresh, radiant glow.**

# CASE STUDIES

**BEFORE**

**AFTER**

**Case Study:** Yvonne, 63

**Concern:** Premature ageing caused by prolonged sun exposure resulting in loss of skin elasticity and skin laxity.

**Results after 8 treatments:**

Wrinkles smoother and tighter, firmer jowl and neck area.

**BEFORE**

**AFTER**

**Case Study:** Syreeta, 41

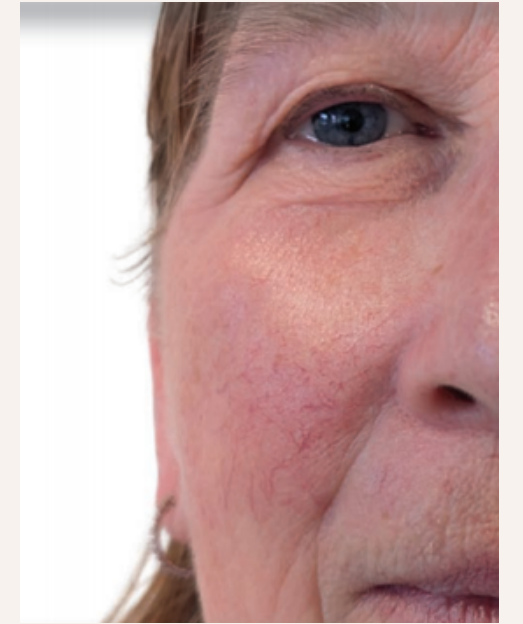

**Concern:** Sallow complexion, skin laxity with a focus on 'Tech Neck'.

**Results after 6 treatments:**

Tighter, firmer jawline, plumper, more lifted cheek contour, a brighter fresher complexion.

**BEFORE**

**AFTER**

**Case Study:** Kathryn, 67

**Concern:** Dryness, redness, and sun damage.

**Results after 7 treatments:**

Smoother texture, reduced redness and pigmentation, and hydrated skin.

# REJUVA MED TREATMENT FAQs

## **How many treatments should I have?**

Rejuva Med can be enjoyed as a one-off treatment for an instant glow-up, ideal before a special occasion. For optimal and longer-lasting results, we recommend a course of 6 or more weekly treatments. After completing the initial course, to help keep your skin looking its best, a maintenance treatment is recommended every 3 months

## **What is Multipolar Radio Frequency?**

Multipolar Radio Frequency is a non invasive treatment that gently heats the skin to stimulate collagen, improving firmness, tightness, and overall skin tone.

## **What does Multipolar Radio Frequency feel like?**

You may feel a warm, soothing sensation on the skin - comfortable and relaxing.

## **What does Microcurrent feel like?**

Microcurrent is virtually sub-sensory. Most clients feel only a slight tingling or warming sensation, describing it as relaxing and pain-free.

## **What is FPL?**

FPL (Focused Pulsed Light) is an advanced light treatment designed to rejuvenate the skin and help improve concerns such as acne and blemishes. It uses precisely filtered light to target the skin at the exact wavelengths needed, delivering effective results with lower energy.

## **What does FPL Skin Rejuvenation feel like?**

FPL is gentle on the skin, with minimal discomfort, you may feel a brief flick sensation which fades instantly. FPL has little to no downtime, allowing treatments to be performed more frequently for faster visible improvements.

## **What is Infusion Atomisation?**

Infusion Atomisation delivers active serums deep into the skin using a fine mist and gentle electrical currents for enhanced serum absorption.

## **What does Infusion Atomisation feel like?**

You will feel a light, refreshing mist, along with a gentle electrical current tingling sensation.  
Will there be

## **Will there be any downtime after my Rejuva Med treatment?**

The treatment is completely pain-free with no downtime. You can resume normal activities immediately

## **What is Microcurrent?**

Microcurrent therapy delivers low-level electrical currents to tone facial muscles and promote cellular activity.
